WEEK 2

- Water early morning and late afternoon every day.
- Lift corner of slabs to ensure soil beneath is soaked.
- Mow at 25mm 14 days after lawn installation, then water.

WEEK 3

- Water early morning and late afternoon every day.
- Mow at 25mm 21 days after lawn installation, then water.

WEEK 4

- Space out watering across three days.
- Mow at 25mm 28 days after lawn installation, then water.

Next steps

Start the annual lawn care phase

SUMMER

DEC • JAN • FEB

Thorough waterings as needed
Deep hydration counteracts heat stress.

Mow at least once per week
Set blades to cut height of 20-25mm.

Managing heat stress

SPRING

SEP • OCT • NOV

Apply fertiliser start of September
300g of LSA Fertiliser per 100m² of lawn.

Water 1-2 times per week / as needed
If dry and brown, water daily until green again.

Mow at least once per week
Set blades to cut height of 20-25mm.

Monitor pests, treat as required
If using pesticide, follow label instructions.

Fertilisation & regular mowing

AUTUMN

MAR • APR • MAY

Preparing for winter

Apply fertiliser start of March
300g of LSA Fertiliser per 100m² of lawn.

Water 1-2 times per week / as needed
If dry and brown, water daily until green again.

Mow at least once per week
Set blades to cut height of 20-25mm.

Weed Management

WINTER

JUN • JUL • AUG

Apply fertiliser start of June
300g of LSA Fertiliser per 100m² of lawn.

Monitor weeds, remove / treat as required
If using herbicide, follow label instructions.

Water 1-2 times per week / as needed
If dry and brown, water daily until green again.

Mow at least once per fortnight
Set blades to cut height of 20-25mm.

WATERING

Frequent watering guarantees a beautiful lawn

Keeping your lawn hydrated is the best way to ensure it's healthy and strong and able to cope with environmental stresses, like heat, wear and weeds.

Once your lawn is established, you will probably start to relax with the watering schedule and may even forget about it! We all do it, but if your lawn starts to brown off, it's easy to restore its healthy green appearance with a good drink.

TURF TIP: If you walk on your lawn and the blades don't spring back up, your lawn is probably dehydrated – give it a good soaking!

MOWING

The One Third Rule

The rule of thumb when it comes to lawn mowing is to never cut more than one third of your leaf blade per mow. Regular mowing at the same height is key.

However, if you're mowing after a long period of growth, or you've scalped your lawn by accident, it may look bad – but rest assured it will grow back! Simply keep up the water, mow regularly and do not fertilise if it was healthy beforehand.

TURF TIP: Choose the mower height that makes your lawn look best – to keep it looking beautiful make sure you mow regularly at this same height.

WEEDS

Pull them out at first sight

The best way to deal with weeds in your lawn is to pull them out manually, straight away – as a preventative measure before they become widespread.

Applying a selective herbicide is a practical way to treat a large area of weed affected lawns, though may not kill all specimens and usually sets your lawn back slightly.

TURF TIP: Hand removing weeds is easier than you think! Use a sharp instrument like a weeding tool or hand fork / spade to leverage them out.

PESTS

Monitor regularly, act quickly

There's a number of common lawn pests that may show up in your lawn – but very rarely will they cause major harm.

Missing foliage and dead patches can show as signs that you have pests in your lawn – but it's not always the case! It's important to identify what pest you're dealing with before reaching for the pesticide.

TURF TIP: If you suspect you have lawn grubs, look for a plague of caterpillars amongst your lawn.

Twin View Turf are Brisbane's premier turf supplier for new lawns, sportsfields, golf courses and public spaces. Our freshly harvested quality turf is second to none.
