

New B-3725 Recessed Hand Dryer with an oversized drying alcove

B-3725 provides the benefits you need from the features you want.

The sleek, low-profile recessed design with 50 mm protrusion meets accessibility requirements. The satin-finish Type 304 stainless steel cover maintains its beauty and durability for years of use.

The energy-efficient 1000 Watt motor uses less energy than most warm air hand dryers, yet delivers a 17-second dry time for greener washrooms. Hand dryers also offer 95% cost savings versus paper towels.

The water absorbent surface minimizes splashing and water drips on the patron, wall or floor for better hygiene. The oversized 150 mm deep drying alcove encompasses patrons' hands for comfort.
