

Technical Data Sheet 50% Tin/50% Lead Stained Glass Wire Solder

50% Tin/50% Lead is a general purpose solder used in the soldering of copper and copper alloys and/or ferrous based alloys. This alloy offers satisfactory corrosion resistance properties and is generally used where temperature requirements are critical.

<u>Technical Data</u>

- Color:
- Melting Range:
- Shear Strength:
- Tensile Strength:

Gray/Silver 361° - 421° F (solid to liquid) 5200 psi 6000 psi

Use with adequate ventilation and proper personal protective equipment. See SDS for any specific emergency information.

Do not dispose of any hazardous materials in non-approved containers.
